

示例代码

```
using System;
using System.ComponentModel;
using System.Windows;

namespace WpfAppDemo
{
    /// <summary>
    /// Interaction logic for App.xaml
    /// </summary>
    public partial class App : Application
    {
        protected override void OnStartup(StartupEventArgs e)
        {
            #region 示例代码开始

            Ihstudio.events.EventHub.GetEventHost<Ihstudio.onlyruns.OnlyRunExitingEventArgs>().Handler += OnlyRunExiting_Handler;

            Ihstudio.events.EventHub.GetEventHost<Ihstudio.onlyruns.OnlyRunActivatingEventArgs>().Handler += OnlyRunActivating_Handler;
            Ihstudio.onlyruns.OnlyRun.ExitOrActivate(32700);
            #endregion

            base.OnStartup(e);
        }

        private void OnlyRunActivating_Handler(object sender,
        Ihstudio.onlyruns.OnlyRunActivatingEventArgs e)
        {
            App.Current.Mainwindow.Activate();
        }

        private void OnlyRunExiting_Handler(object sender,
        Ihstudio.onlyruns.OnlyRunExitingEventArgs e)
        {
            Environment.Exit(0);
        }
    }
}
```
